
Patterson Elementary PTA, Tie-Dye Care Guide

Please take this home and follow in order.

Initial Wash Process

1. **Keep Bands On:** Rinse the item while still tied up under cold running water to prevent colors from bleeding into white areas.
2. **Rinse to Clear:** Gradually increase water temperature from cold to warm, and finally to hot, squeezing gently until the water runs clear.
3. **Remove Bands:** Remove the rubber bands and rinse again in warm/hot water.
4. **Machine Wash:** Wash the item(s) alone in the washing machine using hot water and a small amount of detergent.
5. **Optional Step:** To ensure maximum color retention, soak the item in equal parts white vinegar and cold water for 30 minutes after the initial rinse.

Subsequent Washes

1. **Initial Times:** Wash new tie-dye items separately for the first 1-2 washes to avoid staining other clothes.
2. **Water Temp:** Use cold water for future washes to prevent fading.
3. **Detergent:** Use mild, color-safe detergent.
4. **Method:** Air drying is best to prevent fading, but you can tumble dry on low heat.
